ABOUT ME

I'm Khushi Narang

A Computer Science and Design Engineering student at Dayananda Sagar College of Engineering, passionate about blending logic, visuals, and storytelling.

My work moves across disciplines from editorial layouts and branding systems to compelling written content and digital interfaces.

I'm especially interested in how people think, feel, and behave, and that curiosity often shapes the design choices I make.

SKILLS

Design tools

Intermediate

Basic/ Learning

Competencies

- Layout & Editorial
- Brand Identity
- Presentation Design
- Creative Direction (student-led events)
- Content Writing

Soft Skills

- Leadership
- Teamwork
- Communication
- Attention to detail

Inscribe.

Reimagining the voice and visuals of our student-led publication.

1 week

01

Overview.

The original Inscribe magazine, created during my first year using Canva, served as a functional base but lacked a unified visual identity. In this redesign, I aimed to craft a publication that feels curated, timeless, and expressive of student voices through thoughtful editorial structure, custom layouts, and a refined tone.

Goal.

- Introduce a modular layout system
- Create a consistent editorial voice
- Make it visually print-ready and adaptable for future editions
- Enhance reader engagement through intentional pacing and storytelling

Old vs New Submission layout.

Initial Version.

As a beginner exploring design tools, I designed the original issue using Canva. It offered a basic structure but limited creative freedom and visual coherence. This version helped shape my understanding of layout, but over time, the need for a stronger editorial identity became clear.

check out this version of the magazine here:

Cover Exploration → Final Cover Design.

Cover Evolution:

The initial renditions of the magazine felt visually overwhelming and lacked a unified theme. As the design concept evolved, I shifted toward the concept of a vintage-style publication, incorporating realistic textures and imagery. After several iterations exploring layout, tone, and balance, I arrived at a final version that felt cohesive, editorial, and true to the magazine's voice.

Final Cover:

Final Magazine Redesign.

With a stronger grasp of editorial structure, I rebuilt the magazine from scratch using Figma. This version was crafted around a flexible grid system, consistent typography, and a calmer visual language. Each layout was designed to guide the reader smoothly, balancing imagery and text to create a cohesive and engaging experience.

check out this version of the magazine here:

Furore.

Crafted visual identity for the college fest (including logo, brochure, merch and event specific social media posts)

3 weeks

Furore 2025: Logo.

Explored different visuals to reflect the fest's theme which was Arabian Nights.

Logo evolution:

Final logos:

The final logo balances readability with personality, and scales well across digital and print formats.

Furore 2025: Brochure.

The brochure acts as the face of the fest. It communicates the event list, timings, and vibe. The visual tone was kept colorful yet structured to keep it fun but readable.

Front and back:

Inside:

Furore 2025: Merch.

The T-shirt was kept minimal with high contrast to make the branding pop in a crowd

Idea evolution:

Final Merch:

Front

Back

Furore 2025: Posts for Social Media.

Each post was designed around the specific event theme while staying consistent with the core visual identity. Typography and layout adapt to different content while keeping brand recall intact.

Stories:

Product Defect Detector.

A tool designed to help manufacturing teams detect product defects using AI. The interface enables users to upload product images and receive a classification and confidence score. Simplifying quality control.

- 95–99% Accuracy
- <1s Prediction Time
- Grad-CAM Visualization

3 weeks

Process + Features.

Built using Python, Streamlit, PIL, and a custom-trained model, the app is optimized for both usability and performance. The Grad-CAM heatmap enhances trust by visually explaining predictions.

Feature Breakdown

- Upload Image: Simple drag-n-drop interface
- Defect Classifier: Classifies as defective or not
- Grad-CAM Heatmap: Visual focus area
- Confidence Score: Percentage certainty

Working and Final Output.

1. User uploads an image of a hardware component
2. Model processes the image and classifies it
3. Grad-CAM heatmap highlights key defect areas
4. Outputs are shown with a confidence score

This project pushed me to bridge AI functionality with simple, interpretable UX. Balancing technical complexity with user trust became central and Grad-CAM visualizations were key in closing that gap. While the UI is intentionally minimal, the system was designed with real-world scalability in mind.

Clueminati.

Clueminati is a mystery-based puzzle event designed for our college fest.

I created the concept, wrote all the clues, and designed the presentation decks for a complete immersive experience.

Each deck guided participants through 10 interactive puzzles and a tiebreaker, mixing logic, observation, and storytelling.

3 times (2 weeks each)

Visual Layout.

Overview + more Layouts.

Each slide was themed, animated, and timed for a game-show-like experience.

- Wrote a 10-step puzzle narrative with original storyline and character roles
- Co-hosted and facilitated the live event for 40+ participants, handling real-time scoring, hint distribution, and buzzer-based responses
- Led a volunteer team to coordinate setup, maintain flow, and ensure seamless participant experience in a theatrically decorated space

Content Writing Website.

A curated showcase of creative, technical, and promotional writing samples across formats and platforms.

Live on Wix · Built & Written by Me

1 week

Project Overview.

As a writer, clarity, tone, and versatility matter just as much as creativity. This personal portfolio website was created to bring all my writing work into one place with a voice that's clearly mine.

- From landing page text to project blurbs, every section was written with a clear tone and purpose.
- Structured for Readers: Created distinct sections for creative writing, event reports, monthly magazine, and UX-style content to showcase range.
- Designed the Site on Wix
- Visit the site here:
<https://kcnarang3.wixsite.com/writing-por>

Featured Sections from the Site.

Creative Pieces

Fiction, personal musings, and story-based writing, emotional tone and narrative flow.

Event Coverage

Wrote, organized and executed a large scale event based on clue-solving and a connected storyline

Thanks for Reading!

This portfolio is just a glimpse into what I can do
I'm learning more every day, and I'm always looking for
ways to grow, build, and design with purpose.
